

During the January 22nd conference call the following topics were discussed:

1. Detailed review of the *Methane Emission Factor Development Project for Selected Sources in the Natural Gas Industry-Task 1 Draft Report*

A variety of final suggestions were made regarding additions and revisions to the report. These will be incorporated into a final version of the Task 1 report and the revised report will be posted to the project web site.

2. Discuss the Texas Equipment Survey and the California Equipment Survey to determine the need for a new survey

A variety of equipment surveys that are currently underway were discussed. These included equipment surveys done in Texas (for estimating emissions of ozone precursors): The Texas reports are posted at the project web site:

<http://www.utexas.edu/research/ceer/GHG/files/ConfCallSupp/H40T121FinalReport.pdf>

<http://www.utexas.edu/research/ceer/GHG/files/ConfCallSupp/H068FinalReport.pdf>

In addition, the California Air Resources Board described an equipment survey that they will be conducting for estimating greenhouse gas emissions from natural gas operations in California. Joe Fischer of the ARB promised to keep the project team informed of the progress of the survey. As a follow-up, in late February, he noted that the survey had been posted at:

<http://www.arb.ca.gov/cc/oil-gas/oil-gas.htm>

A list serve for updates is available for sign-up at the web site.

Additional studies that are currently underway, that may be able to provide equipment population information were discussed and to the extent that these data are available, they will be assembled by the project team.
